

### Semi Automated Order Pickers

# N20 | B-N25 SA N20-25 C SA N20 C D | LOL | L SA

Capacity 2.0-2.5 t | Series 1115 | 4587 | 4589 | 4590

### Productive co-drivers

- → Semi-automated driving modes increase picking efficiency by up to 20 percent
- → Eliminating the need to step on and off the vehicle reduces operator walking distances
- → Increased operator concentration increases picking performance and reduces errors
- → Two driving modes 'walk with me' and 'continuous' cover most customer applications
- → More efficient through partial automation without having to change existing processes

## **TECHNICAL DATA** (according to VDI 2198)

### **CHARACTERISTICS**

Linde BlueSpot™ and bumper including safety scanner

Ergonomic remote

Walk with me or Stop and Go function

Computerised diagnostic

#### Safety

- → Various safety systems prevent personal accidents and collisions in semi-automated operation
- → Safety scanner at the front of the vehicle also detects obstacles that suddenly appear in front of the order picker
- → Four antennas determine the relative position of the operator
- → Special protection on the bumper prevents feet from getting under the vehicle
- → Pole-mounted lights indicate current driving mode and warn when remote control and vehicle are not coupled
- → Vehicle independently maintains distance from racking and stops at the end of the aisle to prevent accidents

### **Ergonomics**

- → Semi-automated operation eliminates the need to repeatedly step on and off the vehicle and prevents fatigue
- → Activation of the semi-automated modes is intuitive, safe and easy via remote control
- → In 'walk with me' mode, the operator can choose from three different positions that activate the vehicle's onward travel to provide the ideal walking path to the pallet

#### Handling

- → In 'walk with me' mode, the vehicle follows the operator while picking on one side of the rack, eliminating the walk from the operator's platform to the pallet
- ightarrow In 'continuous' mode, the drive is activated via the remote control and enables convenient order picking on both sides of the rack
- → Ultra-wideband connection between the vehicle and the remote control ensures precise localisation of the operator and exact reaction of the vehicle to the operator's movements
- → Semi-automatic operation is deactivated as soon as the operator drives the vehicle

#### Service

- → Easy cleaning of the safety scanner
- → Vehicle display, lamp post and laser display always provide information on current vehicle status
- → Linde diagnostic tool and CAN bus connection enable simple diagnostics in the event of a repair
- → Simple setup of the semi-automatic system to application conditions such as aisle width or rack length
